## 1. FITTING INSTRUCTIONS

### 1.1. UNPACKING

To avoid damage in transport, the bath is packed in carton with protective tape along the rim, which has to be removed (see figure 1). Check if the inside of the bath is undamaged before installing it.

### 1.2. MAKING THE OVERFLOW OPENING

For baths for which the overflow opening is not made in advance, you can determine its position yourself. The centre of the overflow opening to be drilled is indicated. Select the overflow position you prefer and follow the instructions below.

#### Drill out

1. Fit the hole saw supplied to your drilling machine.
2. Drill out the opening **from the outward side**, positioning the bit of the hole saw in the centre of the circle of the overflow position desired (see figure 3).
3. To fit the drain/overflow combination, see point 1.4.

### 1.3. ASSEMBLY OF LEGS

Below are instructions for attaching the legs to Quaryl® baths. Quaryl® baths **must** be installed using the legs supplied. **Never use screws as fasteners!** They are bonded under the bath using the double-sided tape which is supplied ready fixed to the steel channel leg supports. Set the whole unit on its legs at the place of installation, as close to the wall as possible and make sure all sides are horizontal, using a spirit level along the edges (not on the bottom!; see figure 4). Check to see that all the legs reach the floor and tighten the locking nuts after adjustment (see figure 5). **Do not** fix the feet into concrete!

1. Clean the underside of the bath where the legs are to be fitted, taking care to remove any grease (see figure 6).
2. Remove the film covering the double-sided tape on the legs.
3. Bond the legs to the underside of the bath and press down firmly.

### 1.4. DRAIN/OVERFLOW COMBINATION

The drain/overflow combination is not supplied with the bathtub. Fit this as instructed by the supplier and connect it to the drain. Then check for water-leakage. It is advisable for the drain to be kept accessible through an inspection opening of at least 30 x 30 cm.

### 1.5. SUPPORT

The edges of the bathtub should be supported around. You can do this by having a batten fitted against the wall or a horizontal recess made previously.

**It is essential to leave a gap of at least 3 mm between the bath and the wall/tiles (see figure 7, 8 and 9).**

## 1.6. FINISHING

Degrease the edges with a cloth with spirit. For sealing, apply a layer of silicon compound between the edge of the bath and the wall. This creates a watertight finishing joint (see figure 10). Read the instructions on the silicon compound packing before use.

## 2. MAINTENANCE & GUARANTEE

### 2.1. MATERIALS

This bath is made of Quaryl®. This is quality synthetic coloured throughout and has a hard surface.

### 2.2. MAINTENANCE

#### Cleaning

Your bath will look at its best if you give it a regular rub over with a liquid detergent (Sunlight Lemon, Squezy) and a sponge or soft brush.

For cleaning bathtubs with a matt finish, please rinse with soap and plenty of water.

#### Removing obstinate spots

Chalk spots are best removed with a vinegar solution (see figure 11,12).

#### Proof against household chemicals

Quaryl® baths easily withstand all normal chemicals used in the household without the surface of the Quaryl® bath being affected.

### 2.3. GUARANTEE

This quality product comes with a 10 year guarantee from the date of purchase. The guarantee covers: factory faults, changes in colour and/or cracks resulting from material ageing, and distortions caused by hot water. The guarantee is limited to the repair or replacement of products supplied.

The guarantee is only valid if the product was installed in accordance with our installation/maintenance terms and conditions. And with the exception of the necessary drainage/overflow provision, has not been provided with a system developed or fitted by third parties and has not been subjected to modification (e.g. the drilling of holes) which are not indicated in the installation provisions accompanying the product.

To claim against the guarantee please contact your dealer. Consequential damages and the cost of building-in or removing elements are not covered by the guarantee.
