Tiling Lip

Installation Instructions

Australian Standard 2023/1977 Section 1.5 specifies, "The section of the bath to be installed abutting shall be provided with a tiling flange or bead not less than 12mm in height."

This high impact rigid PVC modified grade material will allow for the bath to be flashed along the full length and ends to conform to the standard.

This material should be cut to the required lengths, mitered at the corners and the area where the flashing material and the rim of the bath meet, should be filled with a silicone mould resistant bathroom sealant.

When the bath is installed, the minimum distance from the outside edge of the flange to the finished edge of the tiles shall be 10mm. The exposed area of the flange shall have continuous fall to the inside of the bath.
